Summary	Full Stack Developer specializing in the MERN stack, with hands-on experience building responsive web applications, real-time messaging platforms, and AI-powered interfaces. Skilled in React.js, Node.js, Express.js, MongoDB, REST APIs, Socket.IO, authentication, state management, and cloud deployment. Focused on building secure, reusable, and user-centered products across frontend and backend systems.		
Technical Skills	Languages JavaScript (ES6+) Frontend React.js, HTML5, CSS3, Redux, Material-UI, Shadcn-UI, TanStack, React Hooks, zustand, Jest Backend Node.js, Express.js, MongoDB, Mongoose, Socket.IO, REST APIs, JWT, bcrypt Tools & Testing Git, GitHub, Vite, Axios, Jest, Cloudinary, Render, Vercel, AWS (Basic)		
Projects	<u>AI Assistant – React-Focused AI Chat Application</u> • Tech Stack: React.js, JavaScript (ES6+), Tailwind CSS, Vercel, Groq API • Built a full-stack AI chat assistant using React and TypeScript, integrating xAI's Groq API to deliver context-aware responses for React development queries, debugging, and interview preparation. • Engineered a dynamic chat interface with persistent session history, real-time message rendering, and Markdown- and syntax-highlighted code block support, improving code readability and end-user response comprehension. • Designed and engineered a responsive two-pane UI (sidebar navigation + chat pane) with dark/light theme toggling and reusable component architecture, ensuring consistent UX across session states. • Deployed and hosted the application on Vercel, integrating with the Groq API via secure server-side/edge functions and optimized build configuration for fast load times and seamless updates <u>Shifra – Voice-Controlled AI Assistant</u> • Tech Stack: React.js, JavaScript (ES6+), Tailwind CSS, Groq API, Web Speech API, Vercel • Developed a voice-activated AI assistant that integrates xAI's Groq API for natural language understanding, paired with real-time speech recognition and text-to-speech synthesis, enabling hands-free, conversational interaction. • Built an animated, state-driven UI featuring a dynamic audio-reactive orb visualizer with distinct states (idle, listening, speaking), enhancing user feedback and interaction clarity. • Configured customizable voice settings — including adjustable speech rate, language selection, and configurable assistant personality via prompt customization to the Groq API — giving users granular control over the voice experience. • Deployed a fully responsive, dark-themed interface on Vercel, optimizing for low-latency voice interaction and cross-browser Audio API compatibility. <u>Real-Time Chat App Full-Stack Messaging Platform</u> • Tech Stack: React.js, JavaScript (ES6+), Redux Toolkit, Tailwind CSS, Socket.IO, Node.js, Express.js, MongoDB, Mongoose, JWT, Cloudinary, Render • Built a responsive one-to-one messaging platform with instant delivery, online presence, typing indicators, conversation history, and sent/delivered/seen states. • Implemented JWT authentication with HTTP-only cookies and bcrypt, plus protected REST endpoints and Cloudinary-based profile image uploads. • Connected Redux-managed UI state to Axios APIs and Socket.IO events; deployed separate frontend and backend service <u>MovieFlix – Movie Browsing Application</u> • Tech Stack: React.js, JavaScript (ES6+), CSS, Vercel • Built a dynamic, responsive movie browsing application using React functional components and Hooks, implementing real-time search, dynamic content rendering, and category-based browsing (Action, Horror, etc.) to improve content discoverability. • Managed application state and component props to maintain consistent UI behavior across interactions, with a fully responsive, CSS3-based layout that ensures seamless viewing on desktop and mobile devices.
